EXECUTIVE SUMMARY

This report presents insights from a technology usage survey visualized through IBM Cognos Analytics. It highlights the most widely adopted programming languages, databases, cloud platforms, and web frameworks among developers. The findings reveal dominant technologies shaping modern development practices and provide implications for future adoption trends.

INTRODUCTION

The purpose of this report is to analyze current technology preferences across key categories in software development. By examining survey data, the report identifies patterns in tool usage and adoption rates, offering a comprehensive view of the modern tech stack landscape.

METHODOLOGY

- **Data Source:** The data source was downloaded from here: [Link](#).
- **Data Preparation:** The columns *LanguageHaveWorkedWith*, *LanguageWantToWorkWith*, *DatabaseHaveWorkedWith*, *DatabaseWantToWorkWith*, *PlatformHaveWorkedWith*, *PlatformWantToWorkWith*, *WebframeHaveWorkedWith* and *WebframeWantToWorkWith* were split and exploded to create individual entries for each column. The developer survey dataset was then imported into IBM Cognos Analytics.
- **Visualization Tools:** IBM Cognos Analytics dashboard features were used to generate bar charts and comparative visuals.
- **Analysis Approach:** Top 10 technologies per category were identified based on frequency counts.

PROGRAMMING LANGUAGE TRENDS

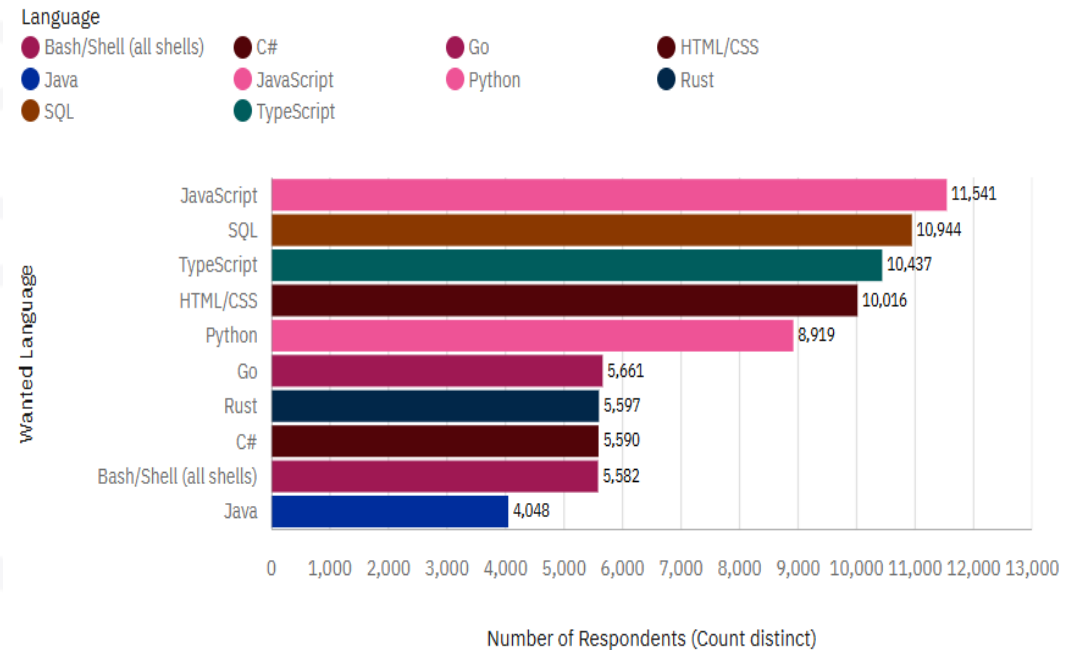

Current Year

Top 10 Used Languages

Next Year

Top 10 Wanted Languages

PROGRAMMING LANGUAGE TRENDS - FINDINGS & IMPLICATIONS

Findings

- The number of respondents who have used JavaScript is the highest at nearly 15 thousand, followed by that of those who have used SQL at nearly 13 thousand. This pattern remains the same for languages developers who want to work with the languages.
- The number of respondents who want to use the current languages decreased.

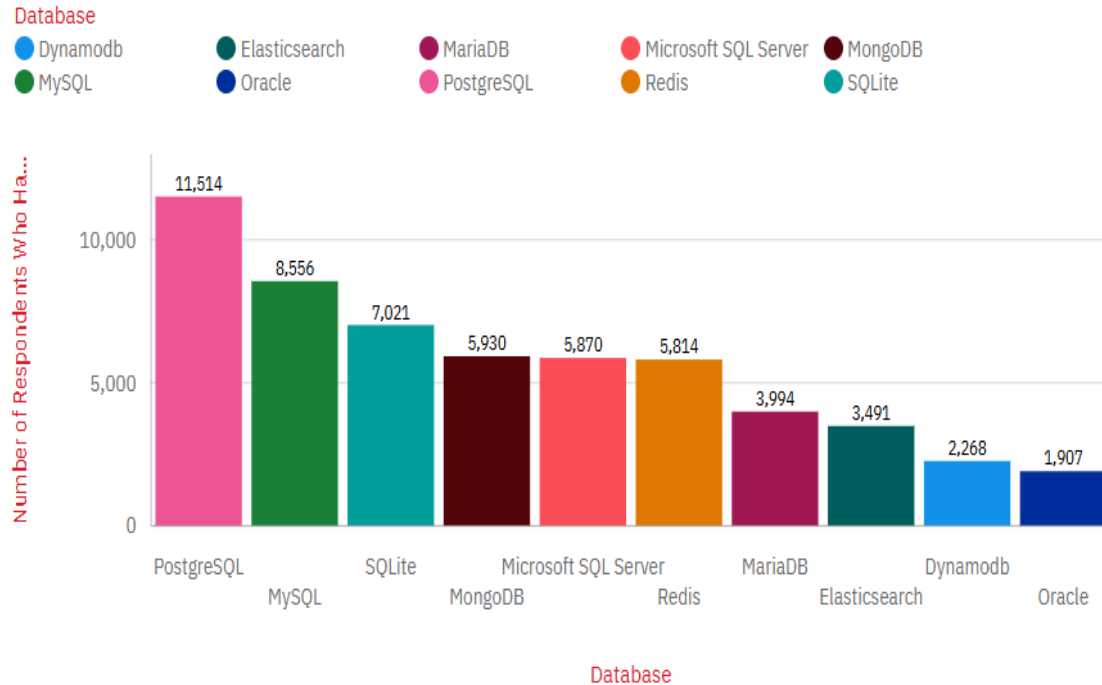

Implications

- JavaScript and SQL remain the most popular languages..
- The popularity of the top 10 languages is decreasing.
- HTML/CSS is losing popularity and position.

DATABASE TRENDS

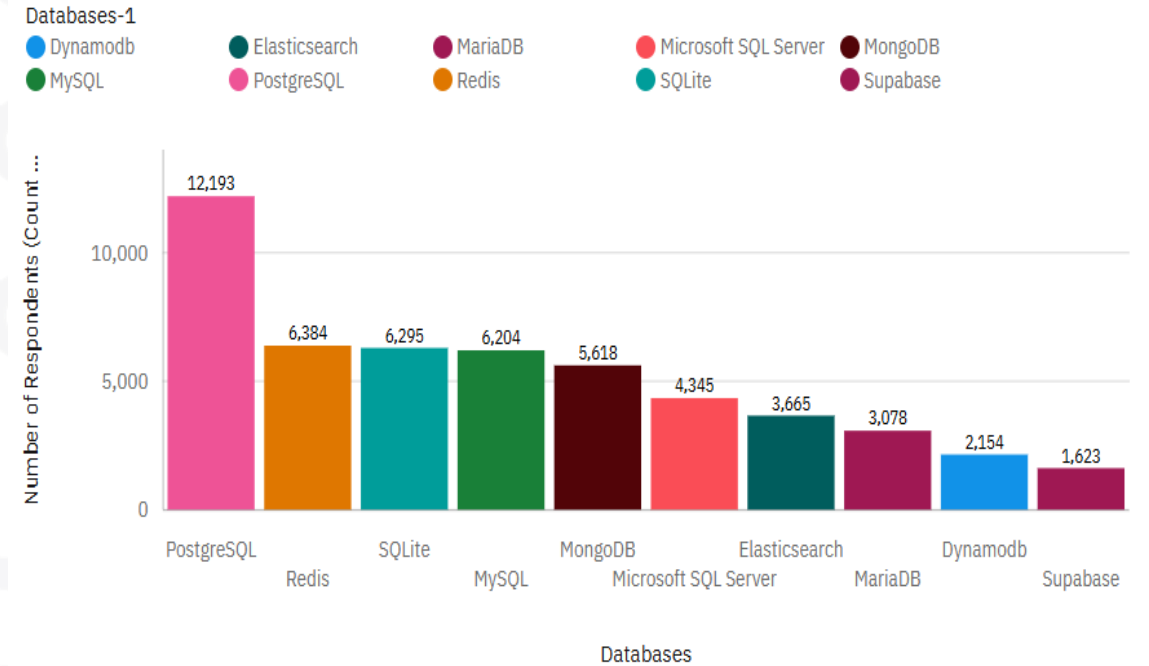

Current Year

Top 10 Used Databases

Next Year

Top 10 Wanted Databases

DATABASE TRENDS - FINDINGS & IMPLICATIONS

Findings

- PostgreSQL has the highest number of respondents for the database used most and wanted most.
- The number of respondents for Redis increased to nearly 6500 and its position improved.

Implications

- PostgreSQL is the most popular database and its popularity is increasing.
- Redis is increasing in popularity and position among databases.

DISCUSSION

-
- FINDINGS AND IMPLICATIONS

© IBM Corporation. All rights reserved.

OVERALL FINDINGS & IMPLICATIONS

Findings

- The tools used by developers show overall consistency in popularity.
- However, some technologies are gaining ground.
- Most respondents reside in the United States of America, are aged between 25 and 44 years and have either a Bachelor's or a Master's degree.

Implications

- The current popular technology tools used by developers will continue to dominate in the short term.
- However, in the long term, they may be overtaken.
- Development requires an active mind, a good education and a conducive environment.

CONCLUSION

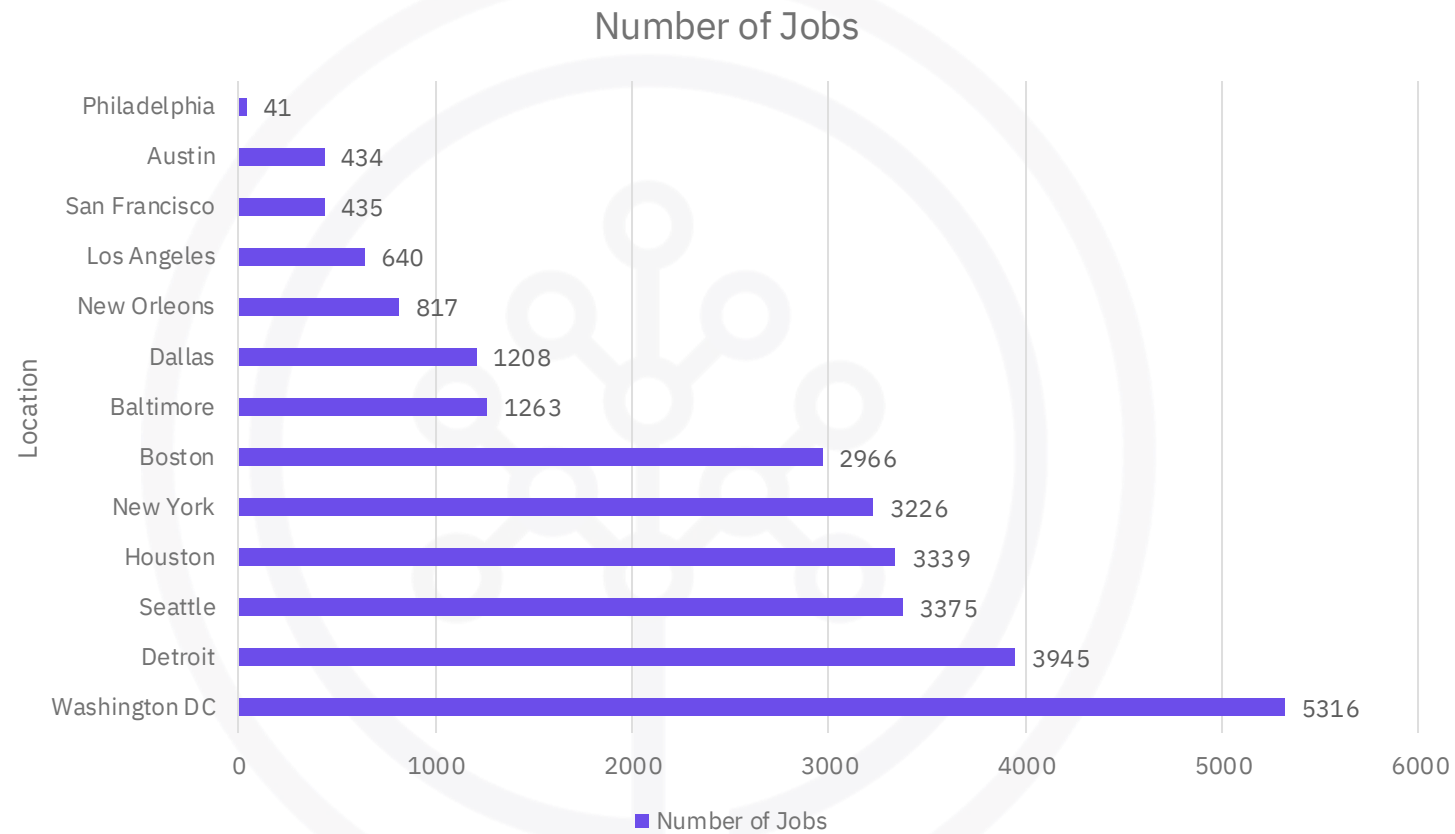

- Development requires an active mind, a good education and a conducive environment.
- The current popular technology tools used by developers will continue to dominate in the short term.
- However , in the long term, they may be overtaken.
